

TECHNICAL DATA SHEET

NEUTRALIZING PASTE

Description :

The **StarNeutra** neutralizing paste is a white, creamy and alkaline paste that contains no toxic components. This product neutralizes and eliminates the effect of residual acids produced by pickling pastes. Neutralization of acids is essential from an environmental point of view.

The **StarNeutra** neutralizing paste converts the acid into lime nitrate and calcium fluoride, both of which are environmentally safe.

Characteristics :

- Neutralizes the strong acids produced by the pickling paste for stainless steels
- Precipitates the dissolved metallic compounds
- Contains no dangerous ingredients
- Low alkalinity

Procedure :

The **StarNeutra neutralizing paste** is applied over the pickling paste after the latter has had enough time to react sufficiently.

1. Apply the StarNeutra neutralizing paste over the stripping paste with a brush
2. Neutralization is complete as soon as the bubbles stop forming
3. Clean the part thoroughly at high pressure using cold water
4. The neutralization residues may now be disposed of without any danger to the environment.

Efficiency: 1 kg enables the treatment of 80 to 150 meters of welding beads.
